emporia

Emporia Pro Level 2 EV Charger

Not just a charger — a complete home energy command center. The smartest way to charge your EV and manage your home's energy, **all in one device**.

Skip the Expensive Panel Upgrade

Skip the $3,000 to $8,000 panel upgrade. The Pro's PowerSmart feature manages your home's power automatically.

Maximum Charging Speed, Always

Hardwired up to 48 amps, the Pro intelligently maximizes charging speed no matter what else is running.

Charge With Your Own Solar Energy

Producing more solar than you need? The Pro automatically routes that surplus straight into your car.

See Your Whole Home's Energy in One App

The included Vue Monitor gives you real-time visibility into every circuit — and every savings opportunity.

Automatically Avoid Peak Pricing

Some utilities charge 3–4x more at peak hours. The Pro automatically shifts charging to cheaper windows.

Built to Last, Easy to Use

Weatherproof design, 25-ft cable, and wall-mounted holster. Compatible with every EV on the road today.

"The Pro isn't just a charger — it's a brain for your home's energy. It skips the panel upgrade, charges your car as fast as possible, and shows you exactly where your electricity dollars are going. Most homeowners save money on their very first bill."
